Charts for Child Trends' Immunization Indicator

Figure 1: Percentage of Children Ages 19-35 Months Receiving the Combined Series Vaccination (4:3:1:3)+ and the Combined Series Vaccination (4:3:1:3:3:1)++, 1994-2013

*This series includes the Hib as completed only if the child received more than 3 or 4 doses of the vaccine, depending on the requirements of the brand. Otherwise, the series was counted as completed if the child received 3 or more doses of the vaccine, regardless of the brand.

** The 4:3:1:3 combined series measures the number of children who have received 4 key immunizations: 4 or more doses of diphtheria, tetanus, and pertussis vaccine; 3 or more doses of polo vaccine; 1 or more doses of a measles-containing vaccine; and 2 or more doses of Hemophilus influenzae (Hib) vaccine.

++ The 4:3:1:3:3:1 combined series measures the number of children who have received 8 key immunizations: the 4:3:1:3 series, plus three or more doses of Hepatitis B vaccine (HepB) and one or more doses of varicella.
