The COVID-19 pandemic has dramatically changed child care services in Minnesota and across the nation. To understand providers’ experiences during the pandemic, an online survey was shared with child care providers between July 31, 2020 and September 9, 2020. A total of 1,898 center-based and family child care providers completed the survey. The survey asked child care providers about their experiences related to a number of COVID-19 challenges. This fact sheet presents initial findings on financial challenges and personal well-being during COVID-19.

Note: The providers invited to participate were applicants to the Peacetime Emergency Child Care Grant Program, and thus, were a subsample of licensed and certified center-based programs and family child care providers throughout Minnesota. These findings are from all providers that applied and responded to the survey, regardless of whether or not they received the grant.

**Costs of doing business**

*Increased “by a large amount” for 47 percent of center-based providers and 35 percent of family child care providers.*

---

**Provider well-being**

While the majority of survey respondents reported minimal levels of anxiety, **15 percent of family child care respondents and 27 percent of center-based respondents reported symptoms of moderate or severe anxiety.**

For comparison, in the general population in 2019 prior to the pandemic, only 6 percent reported moderate or severe anxiety symptoms.

**The average anxiety score for the center-based respondents is significantly higher than family child care providers (p < .05).**

---

Note: * indicates a statistically significant difference (p < .05)

This is one in a series of fact sheets from a study of Minnesota’s Peacetime Emergency Child Care Grant program.
